Lucrezia Songini : Accounting and Control for Sustainability: 26 (Studies in Managerial and Financial Accounting) before purchasing it in order to gage whether or not it would be worth my time, and all praised Accounting and Control for Sustainability: 26 (Studies in Managerial and Financial Accounting):

Sustainability performance measurement and communication play a central role in supporting the implementation of the sustainability strategy, embedding sustainability into day-to-day operations and decision making, and developing relationships with stakeholders based on trust, transparency, and legitimacy. The purpose of this book is to explore new challenges and new prospects for sustainability accounting research and to discuss future directions of research. It considers a large spectrum of different theoretical lenses and research methods, and explores various types of organizational settings and practices in different countries. This book brings together articles that consider the main areas of accounting: financial accounting, auditing and managerial accounting, in order to critically review and advance theorizations and methodological applications to the study of all main accounting fields in a sustainability context. It aims to interest a quite large number of active researchers, professors and practitioners (CPAs and CMAs, managers and executives, but also consultants), both from the accounting field, and from the sustainability and CSR domains.

This volume combines conceptual and empirical articles that collectively review theoretical issues and methodological applications for the accounting and control of corporate sustainability and social responsibility. The first four contributions focus on mechanisms devoted to external communication, covering: corporate social responsibility determinants and the relationship with disclosure, determinants of corporate social disclosure, sustainability disclosure in small and medium enterprises, and water management and accounting. The remaining chapters focus on the role of managerial control systems and accountants and include discussions of the empirical research in management control, strategy, and sustainability; review of the evidences and claims for the future of eco-control mechanisms; the use of causal mapping in the design of sustainability performance measurement systems; and the role of accountants in controlling sustainability information.
