Elmar Altvater, Eileen Crist, Donna Haraway, Daniel Hartley, Christian Parenti, Justin McBrien :
Anthropocene or Capitalocene?: Nature, History, and the Crisis of Capitalism (KAIROS) before purchasing it in order to gage whether or not it would be worth my time, and all praised Anthropocene or Capitalocene?: Nature, History, and the Crisis of Capitalism (KAIROS):

1 of 1 people found the following review helpful. It would be nice to read the insights contained in these essays in

...By youngedenThe message here is frightening, but the authors often lapse into a sort of arcane academic dialect which is almost incomprehensible at times. It would be nice to read the insights contained in these essays in laymans' terms, because they reveal that what we are doing to ourselves and to our planet through capitalism's exploitation of allegedly "free nature" is truly frightening and if continued will ultimately destroy us as a species along with the entire natural world which we are a part of.2 of 4 people found the following review helpful. The bottom line of the bottom lineBy James Shaffer-BauckProvides a fresh perspective on the age we live in and have created. Really gets at the fundamental issue.8 of 9 people found the following review helpful. Great book with a equally great collection of writersBy LeoBixbyKiller book. Great collection of writers, some more lyrical and literature-based, while some fairly intensely theoretical. Great collection for those out there who teach classes on modern debates about capitalism and nature.

The Earth has reached a tipping point. Runaway climate change, the sixth great extinction of planetary life, the acidification of the oceansmdash;all point toward an era of unprecedented turbulence in humanity's relationship within the web of life. But just what is that relationship, and how do we make sense of this extraordinary transition? Anthropocene or Capitalocene? offers answers to these questions from a dynamic group of leading critical scholars who challenge the conventional practice of dividing historical change and contemporary reality into "Nature" and "Society," demonstrating the possibilities offered by a more nuanced and connective view of human environment-making, joined at every step with and within the biosphere. In distinct registers, the authors frame their discussions within a politics of hope that signal the possibilities for transcending capitalism, broadly understood as a "world-ecology" that joins nature, capital, and power as a historically evolving whole.
