From London Publishing Partnership : The Post-Growth Project: How the End of Economic Growth Could Bring a Fairer and Happier Society before purchasing it in order to gage whether or not it would be worth my time, and all praised The Post-Growth Project: How the End of Economic Growth Could Bring a Fairer and Happier Society:

This book challenges the assumption that it is bad news when the economy doesn't grow. For decades, it has been widely recognized that there are ecological limits to continuing economic growth and that different ways of living, working and organizing our economies are urgently required. This urgency has increased since the financial crash of 2007–2008, but mainstream economists and politicians are unable to think differently. The authors of this book demonstrate why our economic system demands ecologically unsustainable growth and the pursuit of more 'stuff'. They believe that what matters is quality, not quantity – a better life based on having fewer material possessions, less production and less work. Such a way of life will emphasize well-being, community, security and 'conviviality'. That is, more real wealth. The book will therefore appeal to everyone curious as to how a new post-growth economics can be conceived and enacted. It will be of particular interest to policy makers, politicians, businesspeople, trade unionists, academics, students, journalists and a wide range of people working in the not-for-profit sector. All of the contributors are leading thinkers on green issues and members of the new think-tank Green House.

About the Author John Blewitt is a writer, educator, a Distinguished Fellow of the Schumacher Institute and a member of the UK Green Party. He is author of *Media, Ecology and Conservation* (Green Books, 2010), *Understanding Sustainable Development*, 2nd edn (Earthscan, 2014) and co-author of *Sustainable Business* (Earthscan, 2014). A sociologist by training, he currently works at Aston Business School.
