Joel A.C. Baum, Bill McKelvey : Variations in Organization Science: In Honor of Donald T Campbell before purchasing it in order to gage whether or not it would be worth my time, and all praised Variations in Organization Science: In Honor of Donald T Campbell:

Variations in Organization Science celebrates Donald T Campbell's many contributions to organization science, presenting new variations which stem directly from his work. Contributing authors review and extend Campbell's theories in four major areas: blind variation, selection and retention especially inside firms; multilevel co-evolution in organizational parts and wholes; process level analysis and modeling epistemology and methodology. The book

includes an unusual appendix, Donald T Campbell's curriculum vitae.

About the Author Bill McKelvey received his Ph.D. from MIT in 1967 and is currently Professor of Strategic Organizing and Complexity Science at the UCLA. His book, *Organizational Systematics* (1982) remains the definitive treatment of organizational evolution and taxonomy. In 1997 he became Director of the Center for Rescuing Strategy and Organization Science (SOS). He was a founder of UCLA's Center for Human Complex Systems Computational Social Science. Recently McKelvey co-edited *Variations in Organization Science* (1999) and a special issue of the journal, *Emergence*. Forthcoming book is: *Complexity Dynamics in Organizations: Applications of Order-Creation Science* (Cambridge University Press).
